

SERVICE PROJECT

Gold Level Project

What counts as a service project?

The answer to this is up to the discretion of the club leader. There are only two general required elements—math and community service. Discuss ideas with your club on how they can use their math skills and also give back to their school, their community, their peers, their family, etc. Your students could organize a math night for your school where they lead math game stations or organize a math bingo game. Another idea is to tutor younger or struggling students within your school or community.

How much time is required to be spent?

Ideally, two hours per club member involved in the Gold Level Project. This time can be a collective two hours spent as a group working on the project or each member can individually complete two hours at their convenience. For example, if you organize a math night that is two hours long and all club members are present and contributing this satisfies the requirement. Alternatively, if students choose to tutor (or something similar), they can each individually do two hours on their own schedule.

How do we document or provide proof of our service project?

This depends on what your service project is and we encourage the club leader to decide what is appropriate here. Students could create a poster or Power Point presentation with photos from the service project or they could write a short reflection paper on what they did, how their math skills helped and what they learned from it all. Any student signing the Gold Level form is confirming that they devoted two hours or more to the project. If students complete hours independently, the club leader may want to consider having an hours log that is signed off on by someone present during their volunteer time. A sample hours log is provided below, but you may choose to use your own.
