Warm-Up!

Try these problems before watching the lesson.

1. (a) Expand the product \((x + 1)(x + 1)\).
   (b) Expand the product \((x + 2)(x + 2)\).
   (c) Expand the product \((x + y)(x + y)\).

2. (a) Expand the product \((x - 1)(x + 1)\).
   (b) Expand the product \((x - 2)(x + 2)\).
   (c) Expand the product \((x - y)(x + y)\).

3. (a) Evaluate \(5^2 - 4^2\).
   (b) Evaluate \(6^2 - 5^2\).
   (c) Evaluate \(7^2 - 6^2\).
   (d) Evaluate \(8^2 - 7^2\).
   (e) Do you notice a pattern in your answers to the first four parts? Will the pattern continue? Why or why not?

4. Compute the following in your head:

\[
13 \cdot 47 + 13 \cdot 21 + 13 \cdot 12 + 21 \cdot 47 + 21 \cdot 21 + 21 \cdot 12 + 46 \cdot 47 + 46 \cdot 21 + 46 \cdot 12
\]
**First Problem:** What is the value of $131^2 - 121^2$?

**Second Problem:** What is the value of $\frac{444^2 - 111^2}{444 - 111}$?

**Third Problem:** What is the value of $133^2 + (2)(67)(133) + 67^2$?

**Fourth Problem:** Suppose the $9 \times 9$ multiplication grid, shown here, were filled in completely. What would be the sum of the 81 products?
Follow-up Problems

6. Given that $5555^2 = 3086358025$, find $5556^2$.

7. Find the prime factorization of $3^8 - 2^6$. As an extra challenge, see if you can find it without writing anything down!

8. What is the sum of the digits of $29999999^2$?

9. Compute the product
